GI SURGERY

## DAVOSCOURSE ROBOTIC TRAINING 2022

Dear colleagues and participants!

Robotic surgery is an interesting and growing field also in visceral surgery. Starting in 2019 with the Da Vinci System at the industry booth we are enlarging the training options every year. In 2022 we will offer several training courses running additional to the regular schedule of the DavosCourse Modules Basic, Intermediate and Advance, but also include Robotic exercises in the new module HPB and Upper GI.

### Training Courses:

- **Robotic Course A: First Assist - Certification**
- **Robotic Course B: Basic Simulation Training**
- **Robotic Course C: Certified Surgeons Intermediate Training**
- **Robotic Course D: Experience Training Colorectal & Hernia**
- **Robotic Course E: Experience Training HPB & Upper GI**

See details of course schedules and participation on page 2.

All courses will only be additional to the DavosCourse Modules Basic, Intermediate and Advanced. Participants as well as Instructors, Faculty and Board are invited to join. During the practical exercises of your own DavosCourse Module no participation in a Robotic Course is possible.

**NEW:** Participants in the new DavosCourse Modules HPB and Upper GI will have robotic training within their practical exercises, but are also allowed to book Robotic courses B – E.

We are looking forward to meeting you in Davos again!
